

Pixlr Worksheet - Straighten a crooked image

How do you straighten a crooked image? This worksheet covers the use of the Marquee tool, Free Transform and copying an image

Video available on Youtube: <http://youtu.be/z05JWmmxonA>

Crooked image

Here is the problem. An image where the horizon is crooked - the yellow line demonstrates this quite clearly. The problem: how to straighten the horizon.

Tilt the image

Open an image.

Select **Edit, Free Transform**.

At the bottom right of the image, under the picture, your cursor will turn to a directional arrow. Hold down the left mouse button over this arrow and turn your picture until the horizon straightens.

Click Edit, then **Yes**, you want to apply the changes.

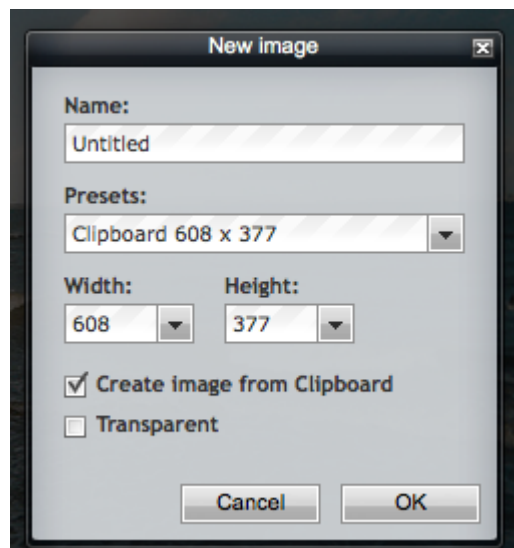

Copy the straightened image

Select the Marquee tool. Draw a "square" to select the image. Go within the white sections created earlier by your tilting.

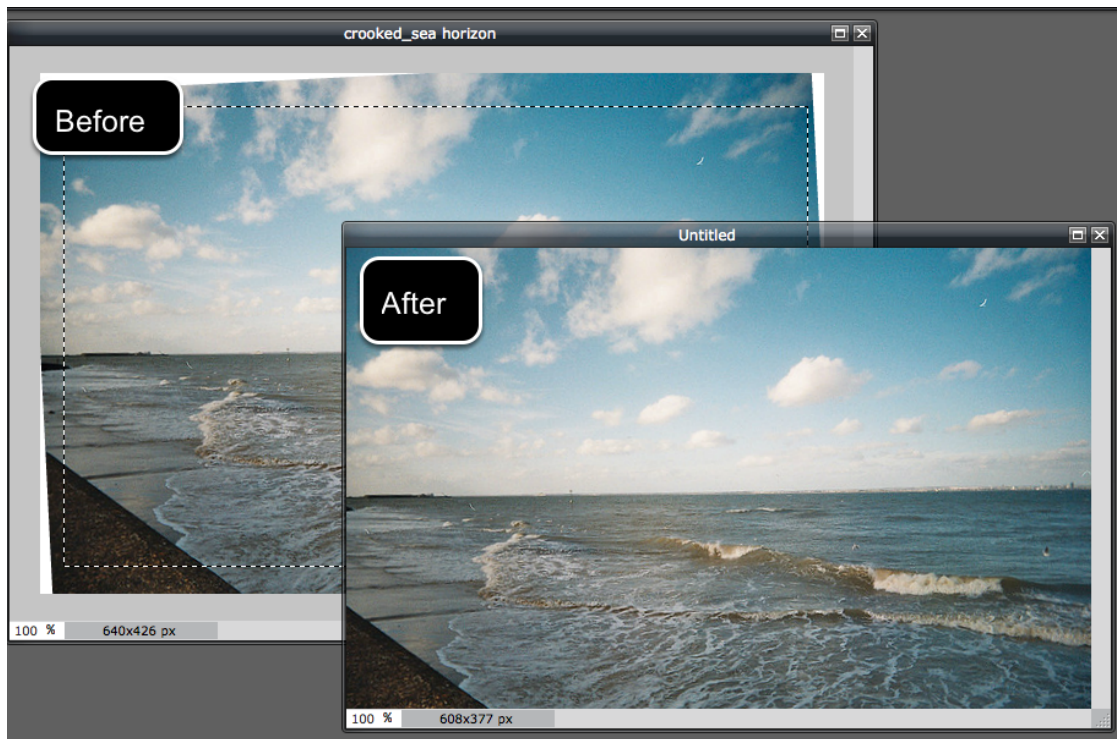

Copy the new, straightened image. **Edit, Copy.**

Create a new, straight image

Click **File, New Image**. Select: **Create image from clipboard**.

Before and After images

Save and rename the new straight image
